Letter of Attestation

To whom it may concern,

Parameter (Anytool, Inc.) deployed the Parameter AI Penetration Testing Agent to conduct authorized penetration testing for **akify**. Each assessment was configured for the access and system knowledge made available under the agreed rules of engagement. The authorized scope covered **akify.ai, cron-jobs-lime.vercel.app**. The Parameter AI Penetration Testing Agent executed **2 assessments** between **October 13, 2026** under the oversight of the Parameter Security Research Team.

The assessment used autonomous, agent-driven security testing to map the authorized attack surface; probe application and API behavior; evaluate authentication, authorization, access-control, and business-logic paths; and validate exploitable weaknesses. The agent performed active probing, fuzzing, and controlled exploitation consistent with the agreed scope and safety controls. Testing was informed by the **OWASP Web Security Testing Guide v4.2** and **OWASP Top 10:2025**, with relevant controls from the **OWASP Application Security Verification Standard v5.0.0** considered based on the authorized scope. The agent remained within the authorized scope and did not chain or escalate exploitation beyond the approved rules of engagement.

The Parameter AI Penetration Testing Agent reported only findings supported by reproducible evidence and, where applicable, proof-of-concept validation. Parameter reviewed and issued the assessment results and made all confirmed findings available to akify for remediation. The assessment identified **11 findings: 2 High, 4 Medium, and 5 Info**. As of the date of this letter, 11 have been remediated and verified by Parameter. There are no unresolved critical or high severity findings.

Based on the authorized scope and assessment activity recorded by the Parameter platform, Parameter confirms completion of the assessment activity described above. This letter is a point-in-time statement and does not certify that akify or its systems are secure, vulnerability-free, or compliant with any law, regulation, or standard, nor does it guarantee future security. The final reports are the authoritative record of findings, limitations, and recommendations. This letter may be shared with akify's customers, auditors, and partners; requests to verify it may be directed to security@parameter.ai.

Sincerely,

Sayaan Alam

Parameter Security Research Team
